

RENO MEN BUY
THE HARNAN MINE

The Tohoqua Mining company's estate, located 140 miles northeast of Reno, in the Leadville district, one

of the largest mining properties in this section, and until recently the property of John Harnan and his associates, has been taken over by a Reno syndicate.

The Tohoqua property was acquired

by Mr. Harnan about 12 years ago and nearly half a million has been expended in its development. It has produced close to \$200,000 in lead-silver ore and is equipped with a concentrating plant.

The new ownership will operate under the name of the Leadville Divide Mining company, which has the following officers: A. A. Codd, president; W. H. G. Buck, secretary-treasurer; G. T. Stevenson and E. M. Manson, directors. J. W. Morris has been employed as engineer and superintendent.

LEVYING TAXES ON
ALL TOBACCO PRODUCTS

(Correspondence Associated Press)
BERLIN, April 30. Germany plans to materially increase its income through increased cigarette and tobacco taxes. Smokers see prospects of further hardship in this. The cigarette tax yielded 520,000 marks in the first nine months of 1919. Simultaneously, cigarettes steadily deteriorated in quality until they both were expensive and wretchedly poor.

ASSESSMENT CALL
Tonopah Glass Queen Mining Company

Location of principal place of business, 550, Francisco, California. Location of works, Tonopah, Nye County, Nevada.

Notice is hereby given that at a meeting of the Board of Directors, held on the 24th day of May, 1919, an assessment (No. 17) of one (1) cent per share was levied upon the capital stock of the corporation, payable immediately to United States gold coin to the Secretary at the office of the company, Room 265, Russ Building, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 25th day of June, 1919, will be delinquent and advertised for sale at public auction, and unless payment is made before, will be sold on TUESDAY, the 25th day of July, 1919, to pay the delinquent assessment, together with the cost of advertising and expenses of sale.

By order of the Board of Directors,
CHARLES D. OLNEY, Secretary.
Office—Room 265, Russ Building, San Francisco, California.
M26, 229.

The White Hussars at Chautauqua

Two Splendid Programs on the Third Day

The White Hussars bring to Chautauqua two of the big musical programs of the week on the third day. For several years they have been heavily featured in the East and are recognized as one of the genuine musical successes of the platform.

This splendid organization is a singing band with a program of unusual variety. They have an ensemble seldom found in organizations of twice their size. They all possess fine voices and are masters on their many band instruments. The best in the musical library is to be found in their programs, balanced with lighter music and popular airs. Their two programs are of such excellence and variety that whatever your musical taste may be you will be genuinely surprised and pleased.

NEVADA'S VAST MINERAL WEALTH
PRODUCED BY MANY BONANZAS

(By JOHN A. SARGENT in the San Francisco Chronicle)

Mining is one of the greatest industries known to humanity. The extraction of the precious or money metals has occupied man and capital with fascinating interest for centuries. The fact that almost every other line of human enterprise is more or less subject to monopoly and to trust combination makes mining a unique industry. It is practically the only field today in which the poor, struggling prospector has an equal chance with the owners of untold millions.

As a business, considered not from the speculative but from the conservative side, it offers greater returns than any other known occupation. There are two phases of mining. One is the speculative stock side, and the other is the mining. In this latter light, mining is nothing more or less than a manufacturing industry—just as steel is a finished product from raw materials, so are gold and silver finished products of ore and quartz.

Mining as a business is highly successful. Conducted in an honest and intelligent manner, there are few failures connected with it. There are failures, it is true, but wherever it has been pursued as a business, as in South Africa, on the Mother Lode of California in Virginia City, Nevada; at the Treadwell Mine on Douglas Island, on the Homestake in the Black Hills, at Butte City, Mont., or Jerome, Arizona, immense fortunes and tremendous rises in values have been the rule.

It is in successfully managing the mine. Many mining companies go to pieces on expensive and luxuriantly furnished offices and high salaries. No business on earth can stand 50 per cent of its income paid in the nonproductive investments of fiscal agents, commissions and high salaries.

Mining requires that the very largest possible per cent of capital raised should go into development, under the direction of experts, in work that develops, in work that counts, in profitable returns.

Statistics show that Nevada is second

to California in gold output, a fact not generally known. She has produced \$1,541,809,000 in round numbers of the precious metal.

She has produced more gold than Alaska.

More gold than Australia.

More gold than Colorado and Montana combined.

She has produced more gold than Montana, Utah, Idaho, Oregon and Arizona combined. Nevada comprises seventeen counties, mining districts almost in every county.

The mines of Nevada go deep. This is a demonstrated fact, not a theory. The deepest mine in America has been catted on in Nevada. The lower levels on the Comstock are on the 4200-foot level in ore. Eureka reaches a depth of 1800 feet. Austin, 900 feet. Potosi, 1200 feet. Candelaria, 900. Tuscarora, 800 and Tonopah is now 1000 feet in depth. The veins have depth, size and permanency. There are a score of camps in Nevada which have attained a depth of 1000 feet. In Colorado they have only Leadville, 2200 feet and Cripple Creek 2000. In Montana only Butte, 2500 and in Utah only Park City, 1500 feet and Conneaut and Grand Central 2200 feet in depth.

While there are uncounted tons of low-grade ore, Nevada has been famous as a producer of high-grade ore. From the Brown Hill one carload hauled 360,000. From Humboldt county, one carload brought \$200,000. From Goldfield, one carload brought \$500,000. One mine the Consolidated Virginia, produced \$79,000,000 in dividends. The ore in Nevada, as compared with other states, have been very high grade. There are many factors which enter into the industry of mining.

Successful mining requires the selection of well-known mineral territory and one would waste time and money in a locality where experience had demonstrated that values are low, or that geological formation did not permit the ore deposits to go to great depth.

A careful survey of the history of mining demonstrates that Nevada offers more advantages in this line than any other section in the world. Its particular advantages are:

Nevada has the world record for mineral production.

Nevada is the most richly mineralized zone in the world.

The mines of Nevada have depth and permanency.

The ores of Nevada are mostly high grade.

The climate permits work the year around.

She has more camps with the big record than any other states in the

"HOME GUARDS"
ARE DISCIPLINED

(Correspondence Associated Press)

WITH AMERICAN ARMY OF THE CUBAN, MAY 1.—Control of the home guards has become so much a problem in various parts of unoccupied Germany that the Prussian government has attempted to meet the situation with regulations to cover all these units, according to information reaching American intelligence officers. Numerous home guard companies from time to time have turned out to be Spartacist nests, when disorders developed, but on the whole, home guards are not only on call are easy to recruit, and are only needed in emergency because of the half-starved and half-trained bands which have appeared almost everywhere.

New regulations for the home guards provide that they shall be under the supervision of the local district and town authorities, with the cooperation of the Workers' Councils and the Farmers' Councils. War weapons must be obtained so far as possible. A pledge to the responsible party in government and loyalty to authority must be taken, oaths shall be elected, but once elected shall have full authority.

Credit Goes to Pennsylvania.
Judge Jesse J. E. of Wilkes-Barre, Pa., after he was told the discovery of anthracite is generally given credit for its introduction as a fuel.

Nevada is hardly prospected.

The thing that attracts the attention of a mining engineer to Nevada is that it is not the "other-rain" state. Colorado has her Leadville and Cripple Creek; Montana her Little Belt; Arizona her Tombstone and Jerome; California her Mother Lode; Idaho her Florence; Alaska her Dawson and Nome.

Nevada, with dozens of camps discovered and worked within 50 years, presents a marvelous record both in the number of camps and their output.

The year 1859 saw the opening of Virginia City, which did not disclose her bonanza until 1873.

Nevada's output is \$900,000,000, computed as follows:

Discovery of	Output
1860—Austin	\$150,000,000
1865—Potosi	80,000,000
1866—Eureka	175,000,000
1869—Hamilton	40,000,000
1870—Mountain City	10,000,000
1873—Tuscarora	45,000,000
1886—Candelaria	50,000,000
1890—De Lamar	20,000,000
1900—Tonopah	120,000,000
1904—Goldfield	85,000,000

1919—Divide, that at present indicates the superior camp of them all.
